

PRODUCT SHEET - POOL ACCESS RAMP

PRODUCT DESCRIPTION

The effectiveness of hydrotherapy is widely recognised by medical professionals, and at Variopool we have extensive experience with this popular form of aquatherapy. To achieve the best results, the use of movable pool floors and bulkheads is essential. These systems allow different user groups to make optimal use of the therapy pool.

Our movable floors can be equipped with adjustable stairs, a lift for people with reduced mobility, or an **access ramp** that allows rehabilitation patients to enter the pool independently. The ramp is specially designed to provide easy access for wheelchair users and anyone who experiences difficulty using traditional ladders or steps.

TECHNICAL SPECIFICATIONS
